

# FORGE KEYLESS LOCK

---

## Quick Use Guide

Forge keyless lock comes Pre-programmed for Single Use Mode. Single Use Mode allows for a revolving user code so multiple people may use the lock without having to reprogram the lock (Shared Locker).

- To lock a cabinet - Dial a 4-8 digit code on the keypad and press the Enter Button. Turn the Knob to lock the cabinet.
- To Un-lock a cabinet - Dial the 4-8 digit code, that was used to lock the cabinet, on the keypad and press the Enter Button. Turn the Knob to unlock the cabinet.
- At any time while entering a code you can press the clear button to cancel the input made.

## Install Instructions

**KEYPAD version**

### **Pearl – installation instructions** Electronic push button cabinet lock

**CompX Pearl**

#### Packaged Components

Contents – Manual Lock Version:

2 AAAA alkaline batteries

1 Offset locking cam / 1 Straight locking cam

FlexaCam adapters

Collar – Intended for surface mount applications

Mounting hardware

Each lock is shipped with two green stickers that are needed for resetting Pearl. Place one of these green stickers on the back of the device, in case Pearl ever needs to be reset. The remaining green sticker should be saved in a safe and secure location for future reference. (See page 9 for reset instructions.)

**The Pearl serial number can be found by sliding the housing base.**

#### Care and Cleaning

To clean the Pearl surface, apply non-acid based cleaner to a clean cotton cloth; do not spray cleaner directly on

the Pearl. Wipe down keypad and its respective housing surfaces of excess cleaner.

## Pearl – installation instructions

Electronic push button cabinet lock

CompX Pearl

### Powering Up and Battery Installation

Pearl is shipped with two AAAA batteries. While Pearl features a low battery indicator, annual battery replacement is recommended. Mixing batteries of different chemistries or age could damage the Pearl resulting in lock failure.

To power up Pearl, remove the red tag. Lock is now ready for use.

Pearl batteries can be changed when locked or unlocked. A small tool, like a paper clip or eyeglass screwdriver, will be required to open the battery cover. (Not Included)

To change batteries:

1. Slide down housing base, see figure 1.
2. Release housing flip up by pressing housing latch, tool required, see figure 2 & 3.
3. Remove the two AAAA batteries and install the new batteries.
4. Close housing flip up and move housing base to the closed position, see figure 3.

*Batteries must be installed correctly for lock to function. Make note of correct battery installation before removing the old batteries.*

### Pearl – installation instructions Electronic push button cabinet lock

CompX Pearl

#### Programming – Introduction

Pearl is easy to program and operate. Type the user code (factory default **1234**) and press  $\Rightarrow$  (enter) to unlock or lock the cabinet.

The supervisor can change operating codes, modes and restore lock settings. While Pearl is easy to program, we highly recommend reading the

complete programming instructions prior to making any changes. Remember to keep track of any programming changes.

Button locations, indicator lights and knob referenced in the programming instructions are shown below.

Programming - Introduction continued

Digital Keyless Locks come pre-programmed for shared use, but can be field programmed for dedicated use. To lock, enter a 4 to 8 digit code and press the lock button. To unlock reenter the previous 4 to 8 digit code and press the unlock button.

### Pearl Programming Mode

To enter programming mode you must know the supervisor code. The default supervisor code is **12345**. Once in programming mode, multiple changes can be made prior to exiting programming.

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Lock must be in the **locked** position prior to entering programming mode.
2. Type supervisor code and press  $\Rightarrow$  (enter).

Rotate the knob to the **unlocked** position and press and hold  $\Rightarrow$  (enter) for **3** seconds (**yellow** indicator light will illuminate).

3. With the **yellow** indicator light illuminated, programming can begin.

### Changing the User Code

To change the user code, follow the steps on page 5 to enter programming mode.

The factory default user code is **1234** (User codes must be 4 to 8 digits in length.)

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
2. Press **1** and then press  $\Rightarrow$  (enter).
3. Type the current user code and press  $\Rightarrow$  (enter).
4. Type the new user code and press  $\Rightarrow$  (enter).
5. Retype the new user code and press  $\Rightarrow$  (enter).
6. If successful, the **green** indicator light will illuminate for 1 second.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Changing the Supervisor Code

To change the supervisor code, follow the steps on page 5 to enter programming mode.

The factory default supervisor code is **12345** (supervisor codes must be 4 to 8 digits in length.)

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

4. Type the new supervisor code and press  $\Rightarrow$  (enter).
5. Retype the new supervisor code and press  $\Rightarrow$  (enter).
6. If successful, the **green** indicator light will illuminate for **1** second.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

*Pearl features a reset code which will restore the default supervisor code and user code. Pearl was shipped with reset stickers – one should be attached to the back of the Pearl, and the extra sticker should be saved in a safe and secure location for future reference.*

*To restore the factory default supervisor and user code, type the Reset Code assigned to the Pearl and press  $\Rightarrow$  (enter).*

### **Pearl – installation instructions** Electronic push button cabinet lock

CompX Pearl

**CompX Pearl features several modes of operation. These functions can be changed using the following instructions with a valid supervisor code.**

#### Programming Single Use Mode / Standard Mode

**Single Use Mode** allows for a revolving user code so multiple people may use the lock without having to reprogram the Pearl each time.

**Standard Mode** operates with a fixed code. To change the code, follow the **Changing the User Code** steps on page 5.

To change the Pearl to Single Use or Standard Mode, follow the steps on page 5 to enter programming mode.

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
  - a. To turn Single Use Mode “ON”: type **51** and then press  $\Rightarrow$  (enter).  
OR
  - b. To return to Standard Mode: type **50** and then press  $\Rightarrow$  (enter).
2. If successful, the **green** indicator light will illuminate for 1 second.

Note: Returning to Standard Mode will reset the factory user default code (**1234**).

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

#### Programming Single Use Timeout ON / Single Use Timeout OFF

**Warning: Manual Lock - Single Use Timeout ON** is a feature to prevent users from occupying a shared use locker or cabinet for a prolonged period of time. Turning this feature on will disable the user code after a programmable amount of time. After this time elapses, Pearl can only be opened with the supervisor code.

To change the Pearl to Single Use Timeout ON or OFF, follow the steps on page 5 to enter programming mode.

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
  - a. To set Timeout ON, type **2XX** and then press  $\Rightarrow$  (enter).  
(XX represents a time period from 04 to 48 in whole hours.)  
OR
  - b. To turn Timeout OFF, type **20** and then press  $\Rightarrow$  (enter).
3. If successful, the **green** indicator light will illuminate for 1 second.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

#### Programming Security Timeout ON / Security Timeout OFF

**Warning: Security Timeout ON** will disable the Pearl from use for 5 minutes when 5 invalid attempts to unlock Pearl occur. During this time, Pearl will not unlock with either the valid user or supervisor code.

To change the Pearl to Security Timeout ON or OFF, follow the steps on page 5 to enter programming mode.

There is a **10** second programming time limit between each step. If Pearl times out or error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
  - a. To turn **Security Timeout ON**, type **11** and then press  $\Rightarrow$  (enter).  
OR
  - b. To turn **Security Timeout OFF**, type **10** and then press  $\Rightarrow$  (enter).
2. If successful, the **green** indicator light will illuminate for 1 second.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Reset User Code to Factory Default 1234 *(Does not apply to Single Use Mode)*

To reset the **User Code** to the factory default **1234** follow the steps on page 5 to enter programming mode.

There is a **10** second programming time limit between each step. If Pearl times out or error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
2. Type **8888** and then press the  $\Rightarrow$  (enter) button.
3. If successful, the **green** indicator light will illuminate for 1 second.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Add User Without Specifying Memory Slot

The **Supervisor Code** memory location is called **Slot 01** and the first **User Code** is called **Slot 02**.

Any additional User Codes reside in memory slots 03-20.

To add a user code without specifying a memory slot (03 -20), follow the steps on page 5 to enter programming mode.

User codes must be 4 to 8 digits in length and **must** be different from all existing codes (including Slot 01 Supervisor & Slot 02 User codes).

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
2. Press **410** and then press  $\Rightarrow$  (enter).
3. Type the new user code and press  $\Rightarrow$  (enter)
4. Retype the new user code and press  $\Rightarrow$  (enter).
5. If successful, the **yellow** indicator light will illuminate.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Add User to Specific Memory Slot (03 – 20)

The **Supervisor code** memory location is called **Slot 01** and the first **User code** is called **Slot 02**.

Any additional user codes reside in memory slots 03-20.

To add a user code to a specific memory slot (03 -20), follow the steps on page 5 to enter programming mode.

User codes must be 4 to 8 digits in length and **must** be different from all existing codes (including Slot 01 Supervisor & Slot 02 User codes).

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
2. Press **411**, then press  $\Rightarrow$  (enter).
3. Type memory slot to be added followed by  $\Rightarrow$  (enter) (for memory slots 03 - 09, you must type leading "0" – e.g. "07" for slot 7)
4. Retype memory slot to be added followed by  $\Rightarrow$  (enter)
5. Type the new user code and press  $\Rightarrow$  (enter).
6. Retype the new user code and press  $\Rightarrow$  (enter).
7. If successful, the **yellow** indicator light will illuminate.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Delete User Without Specifying Memory Slot

The **Supervisor code** memory location is called **Slot 01** and the first **User code** is called **Slot 02**.

The additional user codes reside in memory slots 03-20.

To delete a user code without specifying a memory slot (03 -20), follow the steps on page 5 to enter programming mode.

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
2. Press **400** and then press  $\Rightarrow$  (enter).
3. Type the user code to be deleted and press  $\Rightarrow$  (enter).
4. Retype the user code to be deleted and press  $\Rightarrow$  (enter).
5. If successful, the **yellow** indicator light will illuminate.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Delete User From Specific Memory Slot (03 – 20)

The **Supervisor code** memory location is called **Slot 01** and the first **User code** is called **Slot 02**.

The additional user codes reside in memory slots 03-20.

To delete a user code from a specific memory slot (03 -20), follow the steps on page 5 to enter programming mode.

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again.

1. Place Pearl into programming mode (see page 5).
2. Press **401**, then press  $\Rightarrow$  (enter).
3. Type memory slot to be vacated followed by  $\Rightarrow$  (enter) (for memory slots 03 - 09, you must type leading "0" - e.g. "07" for slot 7)
4. Retype memory slot to be vacated followed by  $\Rightarrow$  (enter).
5. If successful, the **yellow** indicator light will illuminate.

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.

### Display Number of Lock Operation

This feature shows the number of times the lock has been operated. The number of operations are displayed in yellow light blinks and separated by a green blink to determine the next value.

Example; yellow, yellow, yellow, green, yellow, yellow, green, yellow, green, yellow, green would equal 3211 lock operations.

There is a **10** second programming time limit between each step. If Pearl times out or an error is made, programming will end and you will need to enter programming mode again

4. Place Pearl into programming mode (see page 5).
  - a. To display number of lock operations Type **60** and then press  $\Rightarrow$  (enter).OR
  - b. To reset to zero type **61** and then press  $\Rightarrow$  (enter).

Continue programming or press **9** and then  $\Rightarrow$  (enter) to exit programming.
